

# Enhanced Notes

for Dynamics SL

Add **POWERFUL, SECURE, AUDITABLE** notes **anywhere** and to **any screen** in Dynamics SL.

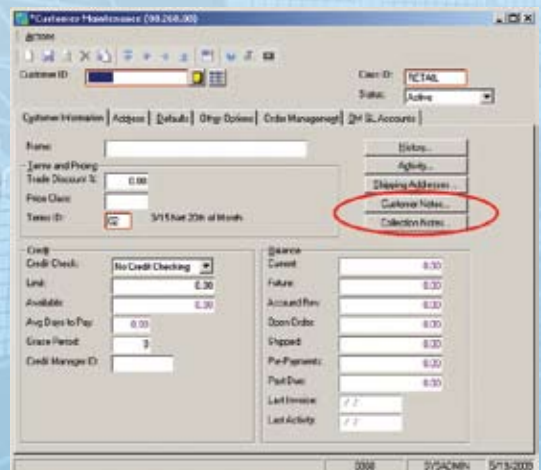

Those little yellow “post it” notes in Dynamics SL are handy but have a lot of limitations. The data can be changed by anyone with no audit trail. You can only have one note per record. And once you get the notes in, it’s hard to do anything with them! They can be difficult to get onto reports and there’s no way to customize or modify their behavior. **Enhanced Notes** gives you Note capability in Dynamics SL that really works!

The **Note Entry/View screen** shows all notes added for a particular note type and record. Each note entry is displayed with the date, time, and User ID from when the note was entered. Selecting a note record in the grid displays the full note text below. Notes are 100% secure. Once they are added, they cannot be changed through the front-end. The data is secure and free from tampering. And you know exactly by who and when the data was entered.

Note Entry/View Screen

**Buttons to access Enhanced Notes** can be added anywhere. Once inserted these buttons automatically call up only notes for the correct note type and the currently selected record.

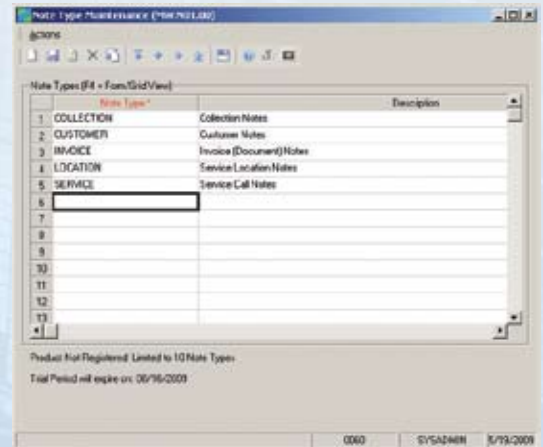

Note Button Example

## for Dynamics SL

The **Note Type Maintenance screen** allows quick and easy creation of new note types. Enhanced Notes available in 10 Note Type and Unlimited Note Type versions.

**Full Dynamics SL customization capability** is supported. You can modify the behavior of note buttons, cause notes to automatically 'pop-up', and much more. Plus note information is stored in the SL database and can easily be included in Crystal or SRS reports.
